Technical Description

- The Wolfking spiral oven is a unique and versatile two zone spiral convection oven that produces excellent tasteful quality products at high production capacity.
- The machine is divided in two fully separated zones suited for independent cooking conditions in both zones. The unique two-zone concept ensures optimum cooking flexibility for your product.

- The principle is based on horizontal airflow equally divided over the tiers. A sophisticated air circulation system with air guiding plates optimises the heat distribution to the product.
- The machine is standard equipped with a dew point control system to optimise your product yield and product characteristics.
- The cooking temperatures can be adjusted to a maximum of 200°C/ 392°F and air circulation speed can be adjusted to create short cooking times and optimum cooking and grilling performance.
- The extreme long spiral cooking belt length ensures optimum product safety at very high production capacity.
- Automatic cooking process control is achieved by means of a control system with touch panel interface, which also store all cooking parameters to control the recipe.

Benefits

- Unique double-spiral design with two independently controlled cooking zones.
- Maximum yields as a result of horizontal airflow and smooth cooking process.
- Juicy, evenly coloured products.
- Large production capacity in a limited floor area.
- Three in one: hot air cooking – steaming – roasting.

- Suitable for a wide range of products.
- High production efficiency and less downtime.
